

Installation Suggestion

Necessary adapter fittings and supply tubes are usually carried by the store where you made your faucet purchase. Instructions should be provided with these parts. Prior to buying fittings or adapters, you should measure what must be connected. A Phoenix faucet's threaded shanks are 1/2" iron pipe size (IPS). The distance to the wall or the floor lines should be measured. You also need to know the size of any fittings. Taking a sketch to the store salesman might be helpful.
